Sequence 6, Application US/09372044A

Patent No. 6492126

GENERAL INFORMATION:

APPLICANT: Dean FALB et al.

ITILE OF INVENTION: Compositions and Methods for the

TITLE OF INVENTION: Treatment and Diagnosis of Cardiovascular Disease

TITLE OF INVENTION: Treatment and Diagnosis of Cardiovascular Disease

TITLE OF INVENTION: Treatment and Diagnosis of Cardiovascular Disease

CURRENT APPLICATION NUMBER: US/09/372,044A

CURRENT FILING DATE: 1999-08-11

NUMBER OF SEQ ID NOS: 44

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 6

LENGTH: 283
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ..

Patent No. 6753314

GENERAL INFORMATION:

APPLICANT: Giot, Loic

APPLICANT: Giot, Loic

APPLICANT: Mansfield, Traci A.

TITLE OF INVENTION: Protein-Protein Complexes and Method of Using Same

FILE REFERENCE: 1596-542

CURRENT APPLICATION NUMBER: US/09/538,092

CURRENT FILING DATE: 2000-03-29

PRIOR FILING DATE: 1999-04-01

PRIOR FILING DATE: 2000-02-01

NUMBER OF SEQ ID NOS: 1387

SOFTWARE: CurapatSegFormatter Version 0.9

SEQ ID NO 941

LEAST APPLICATION NUMBER: WE SEQ ID NO 941

MANDER OF SEQ ID NOS: 1387

"Identification of genes expressed in human CD34(+) hematopoietic
stem/progenitor cells by expressed sequence tags and efficient full-
length cDNA clouning.";

Proc. Natl. Acad. Sci. U.S.A. 95:8175-8180(1998).
                                                                                                                                                                                                 similarity).
-!- SUBCELLULAR LOCATION: Outer mitochondrial membrane.
-!- DOMAIN: Consists mainly of membrane-spanning sided beta-sheets.
-!- SIMILARITY: Belongs to the eukaryotic mitochondrial porin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  16-0CT-2001 (Rel. 40, Created)

--- TISSUB SPECIFICITY: Widely expressed. Highest in testis.
--- DOMAIN: Consists mainly of membrane-spanning sided beta-sheets.
--- SIMILARITY: Belongs to the eukaryocic mitochondrial porin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SEGUENCE OF 1-253 FROM N.A.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                brain, and skeletal muscle.

DOMAIN: Consists mainly of membrane-spanning sided beta-sheets.

SIMILARITY: Belongs to the eukaryotic mitochondrial porin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          15-UUL-1999 (Rel. 38, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FUNCTION: Forms a channel through the mitochondrial outer membrane that allows diffusion of small hydrophilic molecules (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              similarity).
SUBCELLULAR LOCATION: Outer mitochondrial membrane.
DOMAIN: Consists mainly of membrane-spanning sided beta-sheets.
SIMILARITY: Belongs to the eukaryotic mitochondrial porin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
FILE REFERENCE: File Reference: 7326-094
CURRENT APPLICATION NUMBER: US/09/270,767
CURRENT FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 57836
LENGTH: 152
                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                          US-09-543-681A-7558

Sequence 7559, Application US/09543681A

Patent No. 6605709

GENERAL INFORMATION:
APPLICANT GARY BRETON
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PROTEUS MIRABIL TITLE OF INVENTION: NUCLEIC AND THERAPEUTICS
FILE REFERENCE: 2709.1002-001
CURRENT APPLICATION NUMBER: US/09/543,681A
CURRENT APPLICATION NUMBER: US 60/128,706
PRIOR FILING DATE: 1990-04-05
PRIOR FILING DATE: 1990-04-09
NUMBER OF SEQ ID NOS: 8344
SEQ ID NO 7558
                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

Sequence 34, Application US/09489352

Patent No. 6312907

GENERAL INFORMATION:

APPLICANT: Hook, Magnus

APPLICANT: Hook, Magnus

APPLICANT: Hook, Magnus

APPLICANT: Hook, Mark

TITLE OF INVENTION: DbpA AND DbpB COMPOSITIONS AND METHODS OF USE

TITLE OF INVENTION: DbpA AND DbpB COMPOSITIONS OF USE

FILE REFERENCE 4210.000500

CURRENT FILING DATE: 2000-01-21

EARLIER APPLICATION NUMBER: 02/589,711

EARLIER FILING DATE: 1996-01-22

EARLIER FILING DATE: 1996-01-22

EARLIER FILING DATE: 1996-01-24

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 8
GNAUGH
M polyprotein precursor - bunyamwera virus
N; Contains: glycoprotein G1; glycoprotein G2; nonstructural protein
C; Species: bunyamwera virus
C; Species: bulloundation
C; Species: bulloundation
C; Species: bulloundation
C; Species: bulloundation
C; Species: J.F.; Pringle, C.R.; Elliott, R.M.
Virology 148; 1-14; 1986
A; Fitle: Nucleotide sequence of the Bunyamwera virus M RNA segment: conservation of stru
Virology 148; 1-14; 1986
A; Fitle: Nucleotide sequence of the Bunyamwera virus M RNA segment: conservation of stru
A; Residues: 1-1433 < LEE>
A; Cross: references: UNIPROT: P04505; GB:M11852; NID:g210743; PIDN:AAA42777.1; PID:g210744
C; Comment: Specific enzymatic cleavages in vivo yield mature proteins including nonstruc
C; Genetics:
A; Map position: segment M
C; Superfamily: bunyavirus M polyprotein
C; Seywords: glycoprotein, nonstructural protein; polyprotein; transmembrane protein
F; 1-16/Domain: signal sequence #statuss predicted < MPP>
F; C0, 248, 624, 1169/Binding site: carbohydrate (Asn) (covalent) #status predicted
                                                                                                                                                                                                                                                                                                                                                                             RESULT 7

SECRET PROTEIN - yeast (Saccharomyces cerevisiae)
NAlternate names: protein G3197; protein YGL083w
C; Species: Saccharomyces cerevisiae
C; Date: 17-May-1996 #sequence_revision 17-May-1996 #text_change 09-Jul-2004
C; Accession: S64090
S; Rieger, M.; Mueller-Auer, S.; Brueckner, M.; Schaefer, M.
S; Rieger, M.; Mueller-Auer, S.; Brueckner, M.; Schaefer, M.
A; Recession: S64071
A; Recession: S64090
A; Molecule type: DNA
A; Residues: 1-1904 cRIB
A; Resperimental source: strain S288C
C; Gene: A; GD:S0003051; MIPS:YGL083w

1. [DISBASE: Defects in ALDH4Al are the cause of hyperprolinemia type of delta-1-pyrroline-5-carboxylate (P5C) and proline. The disorder of delta-1-pyrroline-5-carboxylate (P5C) and proline. The disorder may be causally related to neurologic manifestations, including seizures and mental retardation.

1. SIMILARITY: Belongs to the aldehyde dehydrogenase family.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description
